

PASS – Process Advanced Service System

Services and parts for your applications
– individual, reliable, competent

we make processes work

The right solution for your requirements

Looking for after-sales solutions? Our extensive Process Advanced Service System (PASS) provides you with after-sales services – customised to your specific requirements.

The framework of our PASS program is designed with you in mind. With the guidance of our experienced Schenck Process team, you can create PASS packages comprising original spare and wear parts, various services and high quality components to meet your needs.

PASS is based on a modular principle – you can choose any individual PASS product or a combination thereof. 4 categories help to easily find appropriate PASS products.

We would be pleased to provide you with individual consultation, either as part of a PASS contract or on individual enquiry.

Whatever Full Service means to you – let's create it together!

Customise your after-sales solution package from the selection of products shown in this brochure.

Keep your processes working
